Title:
Perfect score: 2834
Sequence:
1 MVARVGLLLRALQLLLWGHL......WATELPWMGCWHANSGSALF 520
Scoring table:
BLOSUM62
Gapop 10.0, Gapext 0.5

Searched: 283416 seqs, 96216763 residues

Total number of hits satisfying chosen parameters: 283416

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%
Listing first 45 summaries
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A53711

Collagenase 3 (EC 3.4.24.-) - human

N/Alternate names: matrix metalloproteinase 13 (MMP13)

C,Species: Homo saptens (man)

C;Date: 07-Jul-1995 #sequence_revision 07-Jul-1995 #text_change

C;Accession: A53711

R,Freije, J.M.P.; Diez-Itza, I.; Balbin, M.; Sanchez, L.M.; Blau
J. Biol. Chem. 269, 16766-16773, 1994

A,Filte: Molecular cloning and expression of collagenase-3, a number: A53711; MUID:94266894; PMID:8207000

New matrix metalloproteinases (MMP) genes and polypeptides, useful treating diseases or for screening modulators of MMP to treat such diseases, e.g. mental disorders, Parkinson's disease, cancers or inflammatory conditions. for

Claim 31; Page 60; 94pp; English.

The invention relates to genes encoding matrix metalloproteinases (MMP). The MMP genes are useful for producing MMP polypeptides and for screening modulators of MMP. The MMPs are useful for breaking down extracellular matrix (ECM), which is essential for processes including embryonic

The present sequence is human matrix
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               development, morphogenesis, reproduction, or tissue repair and remodelling. The MMPs are particularly useful for identifying compounds that modulate the activity of genes to treat pathologies, e.g. mental disorders, Alzheimer's disease, multiple sclerosis, Parkinson's disease or motorneuron disease. The MMP polypeptides and genes, as well as their modulators, are useful for treating metabolic diseases and disorders (e.g. type 2 diabetes, obesity, cardiovascular, dyslipidaemias,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                inflammatory conditions (e. diseases or wound healing. metalloproteinase MMPU10

```
CC (PPIMs) given in AAF81740 encode the human protease and protease inhibitors (PPIMs) given in AAF817468 to AAF8494. The PPIMs can have activities such cas: anti-human immunodeficiency virus (HIV); antidiabetic; antithyroid; conspinotropic; antigout; thyronimetic; cytostatic; antithyroid; conspinotropic; antigout; thyronimetic; cytostatic; antitheressive; conspinotropic; antigout; thyronimetic; cytostatic; antitheressive; conspinotropic; antipsoriatic; and hepatotropic. PPIM polynucleotide and converse can be used in the diagnosis, treatment and prevention of autoimmune/inflammatory disorders such as AIDS, DiGeorge's syndrome, cushing's disease, Addison's disease, AIDS, DiGeorge's syndrome, cushing's disease, Addison's disease, autoimmune thyroiditis, converse disease, Hashimoto's thyroiditis, Sjogren's syndrome, Werner's syndrome, viral, bacterial, fungal, parasitic, protozoal, and helminthic configurations and cell proliferative disorder such as arteriosclerosis, cirrhosis, hepatitis, psoriasis and cancer. PPIM configuration probes useful in mapping the naturally occurring genomic configuration probes useful in mapping the naturally occurring genomic constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Yue H,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                New protease (inhibitors) useful for diagnosis and autoimmune/inflammatory disorders such as acquired syndrome, Cushing's disease, Addison's disease and disorders such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cushing's disease; Addison's disease; autoimmune thyroiditis; gout; Crohn's disease; diabetes mellitus; Good pasture's syndrome; infection; Grave's diseases; Hashimoto's thyroiditis; Sjogren's syndrome; cancer; Werner's syndrome; cell proliferative disorder; arteriosclerosis; atherosclerosis; cirrhosis; hepatitis; psoriasis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
            This represents a human MPROT45 polypeptide. The polypeptide can be expressed by standard recombinant methodology. The MPROT45 polypeptide, antibodies and their agonists or antagonists are useful in the treatment of diseases relating to MPROT45 polypeptide including arthritis, respiratory diseases, thrombosis, diabetes, cancer, inflammatory diseases, thrombosis, diabetes, cancer, inflammatory disorders, osteoporosis, cardiovascular disorders, hypertension, stroke, asthma, neurodegenerative diseases such as Alzheimer's, Parkinson's, depression and other CNS disorders or as a vaccine. They are also useful
asthma, neurodege
depression and ot
for diagnosis or
                                                                                                                                                                                                            An isolated polypeptide treatment of diseases relating polypeptide including arthritis, respiratory diseases, diabetes, cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MPROT45; antiarthritic; thrombolytic; antidiabetic; cytostatic; human; antiinflammatory; osteopathic; cardiant; hypotensive; cerebroprotective; antiasthmatic; nootropic; neuroprotective; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAB85427

Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bloactive molecules to cells expressing polypeptides, and detect the presence of mammalian tumors e.g. lung, S PRO

Claim 12; Fig 144; 813pp; English.

ANUI2172-AAU12446 represent novel human secretory and transmembrane PRO CC polypeptides. The PRO polypeptides are useful to detect other PRO CC polypeptides, to link bloactive molecules to cells expressing PRO CC polypeptides, to modulate biological activities of cells expressing PRO CC polypeptides, and to detect the presence of mammalian lung, colon, CC polypeptide expression in a cell sample to that in a control sample. Some CC polypeptide expression in a cell sample to that in a control sample. Some CC polypeptide expression in a cell sample to that in a control sample. Some CC of the 275 sequences are also useful to stimulate the release of tumour CC differentiation of chondrocytes, the proliferation or gene expression in CC pericyte cells, the release of proteoglycans from cartilage, the proliferation of inner ear utricular supporting cells or of T-CC particyte cells, the release of proteoglycans from cartilage, the CC (PBMCS), or the proliferation of endothelial cells. Some of the PRO CC (PBMCS), or the proliferation of endothelial cells. Some of the PRO CC muscle cells or by adipocytes; or inhibit binding of A-peptide to factor CC involved in binding interactions. The polymelocides can be used in assays to identify molecules CC involved in binding interactions. The polymelocides encoding PRO CC transgenic or knock out animals and can be used in gene therapy
